■■ SAFETY FIRST ■■
WALKING IN THE DARK & LOW LIGHTING

SHORTER DAYS MEAN LOWER VISIBILITY. MAKE JOBSITE AND PEDESTRIAN SAFETY A PRIORITY.

■ LIGHT UP THE WORKSITE

Ensure proper temporary or permanent jobsite lighting is turned on BEFORE dusk. Never walk or work in unlit or shadowed zones.

■ WEAR HIGH-VISIBILITY GEAR

Always wear ANSI/ISEA-compliant high-visibility vests, jackets, or reflective apparel. Reflective gear makes you visible from up to 125 meters (400 feet) away—compared to just 25 meters (80 feet) without it.

■ CARRY A LIGHT SOURCE

Use a flashlight, headlamp, or active red/white safety light when moving through dark corridors or vehicle paths.

■ STAY ALERT & UNPLUGGED

Put away mobile phones and remove earbuds. Listen and look for moving vehicles, heavy machinery, and backing trucks.

■ MAKE EYE CONTACT

Never assume an operator sees you. Wait for eye contact or a clear hand signal before crossing a lane of travel.

■ USE DESIGNATED WALKWAYS

Stick to well-lit, pre-planned pedestrian paths and avoid cutting across active vehicle haul roads.

STAY VISIBLE. STAY ALERT. GET HOME SAFE.
